

Visitor badge cardstock

FastScan™ Tenant/Visitor System (TVS) is a factory-installed system for Fastlane® optical turnstiles that reads barcodes on printed visitor badges. FastScan Cardstock is the preferred cardstock to use with FastScan TVS.

FastScan Cardstock

FastScan TVS TI Model

Designed to specs

FastScan Cardstock is designed for optimal performance with FastScan TVS and is recommended by the manufacturer. It is fanfolded so the barcode is presented on a flat surface - this allows for efficient reading of visitor badges on all models of FastScan TVS. Its dimensions work perfectly with the TI model where badges are inserted in a slot as the card guides are factory-set to match this card width. The dimensions are also within the range accepted by most common badge printers.

To assist with setting up the printing of badges at a building, FastScan Cardstock ships with sample cards for illustration and to use for measurement. Details on visitor badge setup are found in the FastScan Technical manual.

Features

- > Fan-folded and perforated with timing mark
- > Pre-slotted to accommodate most badge clips
- > Dimensions of 2.5" x 3.75"
- > Thickness of .007"

Single source

FastScan Cardstock is available from the same supplier as the FastScan TVS system and the Fastlane turnstiles that provide streamlined entry control in building lobbies. It is designed to reinforce the speed and reliability expected with these systems.

Order quantity

FastScan Cardstock has a minimum order quantity of 27,000 cards. Incremental volumes of 9,000 cards are available..
