

Desktop Remote Console

Fastlane Desktop Remote is an intuitive system that provides control of turnstile lanes to staff at a lobby security desk. Never be caught off guard with simple controls and an easy-to-understand interface.

Operation

By pressing the appropriate button, security can grant staff and other visitors access through any of the operational lanes. Desktop Remote can house up to five consoles. One console controls one lane with visitor management and a remote alarm.

Alarm Indication

- A visual indicator notifies security personnel when a second-stage alarm has been triggered

Visitor Entry and Exit

- Operator presses the appropriate button to grant access to any lane

Key Switch and Mode Selector

- Key switch functions as both a simple control and an additional security feature

Safety

- Fire panel integration for tenant safety

Overview

Desktop Remote models are designed to provide maximum operational flexibility for Fastlane turnstiles. They are mounted at the security desk and offer full lane control, access control, and alarm monitoring for each lane. These systems work with all Fastlane optical turnstiles.

Technical specifications

Operating Voltage

- 12v DC @ approx.
- 300mA required

Power Consumption

- 3.6 watts

Enclosure Materials

- Black steel frame, stainless steel cover

Dimensions

- Width: 8.1-19.8" (205-503.5 mm) (determined by the number of consoles)
- Depth: 6.6" (168 mm)
- Height: 1.8" (45 mm) in front rising to 2.6" (66 mm) in the rear

Console Specific (without metal casing)

- Length: 3.92" (99.5 mm)
- Width: 5.12" (130 mm)
- Depth: 1.06" (27 mm)

Due to continuous improvements, specifications are subject to change without prior notice.
