

**Overview**

Floor Protector allows for quick, efficient, and cost-effective installation of Fastlane optical turnstiles without damaging the floor of the building.

**Applications**

Floor Protector is ideal for applications where the flooring materials used (such as marble, tile, granite, etc.) in the floor restrict drilling and cabling or where any such work would be prohibited. Additionally, the system is useful for temporary installations where the tenants of a building are not allowed to affect the infrastructure of the building.

**Accessibility**

Floor Protector meets ADA specifications, and the angle and height of the ramp ensure ADA compliance and wheelchair friendly access.

Model: Glassgate 300

Accessories

# Fastlane® Floor Protector

## Supplemental Floor Protection System

Fastlane Floor Protector is a modular system designed to enable usage of Fastlane turnstiles without the need for drilling fixing bolts into the floor or running a conduit for cables under the floor between pedestals.

Materials

- Mild Steel

The Fastlane® Floor Protector System is a series of metal components that are designed to allow the installation of Fastlane® turnstiles in an area where cables cannot be run under the floor.

The Floor Protector can also be used for temporary installations and enables pedestals to be installed quickly and cost effectively, without drilling or otherwise damaging the floor on which they stand.

Each component part of the Floor Protector is clamped to a pair of Unistrut® Single Channels.
