

# Customization Options for Fastlane<sup>®</sup> Turnstiles

# Entrance Control with Style

Say hello to entrance control security that is as stylish as it is functional. Fastlane turnstiles lead the industry with customization options that allow buildings to set the tone for a safe and efficient lobby.

There are dozens of design possibilities from upgraded metals and custom tops and finishes to unique graphics and customized pedestal shapes.

## The Power of Possibilities for Architects and Designers

No longer do turnstiles have to be harsh, impersonal physical barriers in building lobbies. Customization opportunities allow even the most robust entrance control points to become visually-pleasing entrance experiences.

Explore the design features and functionality available for architects, engineers and designers across most Fastlane turnstiles.

## Finishes

Fastlane products feature no visible screws, no key locks and no speaker grills, resulting in one of the industry's smoothest finishes. To enhance these aesthetics, organizations can select from a wide array of custom metal color options and multiple different surface textures and finishes.

The standard finish across the Smarter Security line of products is 304 brushed stainless steel which is designed to create a luxurious, high-tech feel. Building teams can go beyond the basics with Rimex® metals, offering an extensive catalog of finishes and colors guaranteed to complement even the most custom lobby designs.

Looking for a more diverse color palette to match a corporate brand or current aesthetic? Fastlane turnstiles also feature a variety of different material possibilities including wood finishes and powder-coated stainless steel.

Powder coating enables organizations to match color finishes precisely to align with other building elements and can be added to stainless steel finishes during the production process.

## Tops and End Caps

More than merely the cap and ends of the industry's most progressive turnstiles, there are multiple options to tailor both the top and endcaps of Fastlane turnstiles.

Standard tops for most Fastlane models are the chosen metal with Deep Black Quartz Corian® on the ends for concealing embedded readers. Tops can also be highly customized ranging from materials such as embedded and back-painted glass, to architectural stone or different Corian colors.

End cap customizations also offer similar style and function capabilities ranging from square or round ends, sharper radius corners, or the functionality of adding a card reader depending on the design aesthetic desired.

## Technical Integrations

Beyond style customizations, Fastlane turnstile tops also offer the capability for seamless 3rd party technical integrations such as elevator dispatch monitors, facial recognition and other biometric technologies.

## Glass Barriers

Elevate the business brand presence by incorporating custom graphics such as logos, or decorative accents. Glass barriers can consist of frosted glass or frosted logos in a variety of opacities to complement the overall design vision of your lobby.

## Pedestals

Extend design beyond color and materials. Fastlane turnstile pedestals can also be customized to enhance the look and feel of your lobby even further. Pedestals can be created longer, wider, taller or in different shapes depending upon your architectural requirements.
