

The Next Evolution in Entrance Control

Get to Know the Door Detective® from Smarter Security

A New Way to Secure Interior Entrances

Eliminate tailgating without adding extra security staff

As social engineering tactics become more advanced, facilities find themselves on the offensive to combat both intentional and unintentional security violations. Human hackers are able to take advantage of people who are uncomfortable questioning someone's intentions when they are followed into a secure area or will even pay someone with authorized access to allow them to enter undetected. Potential security breaches and crimes related to unauthorized entrance tactics, like tailgating and collusion, continue to increase.

For buildings looking to help enable their employees, residents or other occupants to reduce unauthorized entry violations dramatically, the Door Detective® by Smarter Security allows facilities to shift the responsibility of physical security back to security personnel where it belongs.

Non-Invasive Advanced Entrance Control

Doors with locks provide suitable security, only until they're opened. Door Detective is a doorway-mounted tailgate detection and direction control system that further secures an access-controlled door in high value facilities like data centers, R&D laboratories, residence halls, casinos, distribution centers, office buildings, fitness centers, and airports.

The Door Detective employs a network of beam paths leveraging neural network intelligence to identify doorway access violations and alert security with an alarm. This helps to ensure that only one person enters for each authorization. It not only monitors how many people pass, but also that they only move in the approved direction.

A Comprehensive Solution to Enhance Security

Door Detective is a cost-efficient way to advance security measures without adding hassle to staff and end users.

Explore the benefits that a Door Detective can provide to facilities:

BETTER PROTECTION OF ASSETS AND PEOPLE

- Detect “human hackers” who can bring down networks and corporations
- Extend added security to areas where there is no officer
- Safeguard interior spaces where unauthorized people could enter unnoticed
- Ensure accurate employee counts for mustering in emergency situations

RETURN ON INVESTMENT

- Save potentially millions of dollars by preventing breaches from intrusions
- Avoid adding additional guards or security officers at key entrances
- Quick and easy installation process

IMPROVED USER EXPERIENCE

- Eliminate “politeness pressure” that accompanies traditional tailgating
- Integrate with existing access control systems to make security seamless requiring no additional authentication from users

Selecting a Door Detective for Your Facility

Thoroughly protect your interior doors once and for all by determining which Door Detective model is right for you. Based on the needs of your facility and staff, each model features key differences that can integrate into your overall security strategy.

Door Detective Classic

- Higher-end aesthetics
- Beams can rotate to extend across hallways without door jam mounting
- Internal CPU with an external 12 VDC power supply

Door Detective Compact

- Most economical model
- Strong tailgate detection
- External CPU and 12 VDC power supply

Door Detective Plus

- Unsurpassed tailgate detection
- Internal CPU and PoE power
- IP communications to support remote configuration and population counting

Each model provides dry contact integration with any access control system, an extra output to activate other systems, and bidirectional waist height detection beams.
